

PORTFOLIO PROJECT BRIEF

Wanderlush Egypt

An immersive travel discovery and itinerary-building experience

**EXPLORE EGYPT • BUILD A JOURNEY • ESTIMATE THE
COST • REQUEST A BOOKING**

Project goal

Create a memorable, consumer-facing React experience that demonstrates visual storytelling, complex frontend interaction, responsive design, and a complete booking journey.

Prepared as a phased build plan for development and portfolio presentation

Project Brief

A clear product definition, customer journey, scope, and ten-phase implementation roadmap.

Project Overview

Wanderlush Egypt is an immersive travel discovery and trip-planning website for a fictional premium Egyptian travel company. It helps local and international travelers explore destinations across Egypt, discover curated activities, create personalized itineraries, estimate travel costs, and submit booking requests.

Unlike a traditional travel website that only lists packages, Wanderlush Egypt allows visitors to actively design their journey. Travelers choose destinations, select experiences, set an accommodation level, organize a day-by-day itinerary, and receive a transparent estimated price.

Experience standard

The finished website should feel like a real premium travel brand. It should combine cinematic photography, editorial layouts, smooth transitions, responsive interactions, and an intuitive booking journey.

Main Objective

- Demonstrate visually impressive consumer-facing web development.
- Show responsive React interfaces across mobile, tablet, and desktop.
- Combine interactive discovery, rich filtering, complex state, and dynamic pricing.
- Deliver a complete customer journey from inspiration to booking request.
- Support both English LTR and Arabic RTL experiences.
- Complement LeadPilot by demonstrating storytelling and consumer UX rather than another SaaS dashboard.

Target Users

International travelers

First-time visitors who need help understanding destinations, experiences, transportation, and approximate costs.

Local travelers

Egyptian residents looking for weekend escapes, coastal vacations, and desert adventures.

Couples and honeymooners

Travelers seeking romantic experiences and premium accommodation.

Families

Visitors looking for safe, organized, family-friendly journeys.

Adventure travelers

People interested in camping, diving, hiking, safaris, and unusual experiences.

Experience and Scope

Primary User Journey

1. Visit the cinematic homepage
2. Explore destinations on the Egypt map
3. Open a destination guide
4. Discover and select experiences
5. Add destinations and activities to a trip
6. Organize a day-by-day itinerary
7. Select an accommodation level
8. Review the dynamic price estimate
9. Enter traveler information
10. Submit a booking request
11. Receive a confirmation and trip summary

Access principle

Visitors should be able to explore and build a trip without creating an account.

Recommended Destinations

- Cairo
- Alexandria
- Luxor
- Aswan
- Siwa Oasis
- Hurghada
- Sharm El Sheikh
- White Desert

Signature Portfolio Moments

- A cinematic homepage hero that creates an immediate emotional reaction.
- An interactive Egypt map with destination previews and transitions.
- A visual day-by-day trip builder with flexible itinerary editing.
- An animated cost breakdown that responds to itinerary changes.
- A polished bilingual booking journey with complete RTL support.

Definition of Success

The project succeeds when a potential client can open it without explanation, discover an inspiring destination, add activities, build a personalized itinerary, understand the estimated price, and submit a booking request without encountering broken or confusing interactions.

PHASE 1

Product Foundation and Visual Direction

Objective

Define the brand, content structure, technical foundation, and visual system before building the main customer experience.

Brand identity

- Define the fictional company purpose, audience, value proposition, personality, and tone of voice.
- Use the tagline: “Experience Egypt beyond the ordinary.”
- Write outcome-focused copy around discovery, flexibility, local knowledge, and memorable experiences.

Visual direction

- Use a cinematic, premium, warm, authentic, and editorial style.
- Build the palette around sand, ivory, charcoal, desert orange, Nile blue, dark teal, and muted gold.
- Use large photography, confident typography, and restrained decorative elements.
- Avoid generic SaaS layouts, excessive cards, glassmorphism, purple gradients, and unnecessary shadows.

Technical foundation

- Set up React or Next.js with TypeScript and Tailwind CSS.
- Create responsive layouts, reusable components, routing, global styles, animation conventions, and image optimization.
- Prepare English and Arabic localization from the beginning.

Demo content

- Create data for eight destinations, at least twenty experiences, six journeys, four accommodation levels, destination guides, reviews, FAQs, and estimated prices.
- Use realistic travel descriptions rather than lorem ipsum.

Deliverables

- Brand and message guide
- Color, typography, spacing, and motion system
- Application routes and reusable layouts
- Localization foundation
- Realistic destination and experience data
- Responsive navigation
- Initial production deployment

Cinematic Homepage

Objective

Create a strong first impression that communicates the brand, highlights Egypt, and introduces the main planning journey.

Navigation

- Logo, Destinations, Experiences, Journeys, Build Your Trip, About, language switcher, and Start Planning action.
- A responsive mobile menu and an elegant compact state while scrolling.

Hero

- Full-screen Egyptian imagery or optimized video.
- A confident headline, short supporting message, quick destination search, Explore Egypt action, and Build Your Trip action.

Discovery sections

- Large editorial destination previews with duration and travel style.
- An interactive map preview that changes imagery and destination details.
- Curated journeys such as Ancient Egypt Discovery, Luxury Nile Escape, Siwa Desert Adventure, Red Sea Retreat, Family Journey, and Romantic Honeymoon.
- Popular experiences such as balloon rides, Nile cruises, pyramid tours, desert camping, diving, and Nubian village visits.

Trust and conversion

- Explain personalized itineraries, selected experiences, local knowledge, flexible planning, transparent estimates, and bilingual support.
- Add clearly identified demo testimonials and a final call to action: "Your Egyptian journey begins here."

Deliverables

- Complete responsive homepage
- Functional calls to action
- Mobile navigation
- Destination, journey, and experience previews
- Purposeful scroll interactions
- Image loading behavior
- Initial English and Arabic content

PHASE 3

Destination Explorer

Objective

Help visitors understand Egypt through an interactive map, searchable destination listing, and rich editorial guides.

Interactive Egypt map

- Show selectable destinations and highlight the current location.
- Update the hero image, introduction, recommended duration, available experiences, and starting estimate when a destination is selected.
- Provide a keyboard-accessible and mobile-friendly list alternative.

Destination listing

- Add search plus filters for region, travel style, recommended duration, and best season.
- Support history, beach, desert, luxury, family, romantic, and nature categories.

Destination details

- Include a cinematic hero, introduction, gallery, attractions, experiences, suggested itinerary, best season, duration, daily budget, local advice, accommodation, related destinations, and Add to Trip action.

Deliverables

- Interactive map
- Destination search and filters
- Destination listing and detail pages
- Responsive galleries
- Add-to-trip behavior
- Loading, empty, and error states
- Accessible mobile alternative

PHASE 4

Experiences Marketplace

Objective

Allow travelers to discover and shortlist tours, activities, and local experiences.

Experience discovery

- Filter by destination, category, price, duration, group type, family suitability, environment, and private or shared experience.
- Use categories such as culture, history, adventure, food, nature, wellness, nightlife, and water activities.

Experience cards

- Show image, name, destination, duration, starting price, category, rating, group format, and Add to Trip action.

Experience details

- Include gallery, description, duration, schedule, meeting point, inclusions, exclusions, equipment guidance, accessibility, group size, cancellation details, price, and Add to Trip action.

Deliverables

- Experience listing and details
- Functional filters and sorting
- Responsive filter drawer
- Favorites or shortlist
- Active filter indicators
- No-results state
- Add-to-trip behavior

PHASE 5

Interactive Trip Builder

Objective

Build the signature feature: a personalized, editable day-by-day journey through Egypt.

Trip basics

- Select travel dates or month, adults, children, duration, and preferred currency.

Destinations and interests

- Select one or more destinations with recommended days, distance, and transport guidance.
- Choose interests including history, culture, adventure, beaches, food, luxury, relaxation, family activities, and photography.

Accommodation and activities

- Offer Essential, Comfort, Premium, and Luxury levels with descriptions and nightly estimates.
- Let users choose experiences for each destination.
- Warn about impossible city combinations, overcrowded days, duplicates, or schedules that exceed the trip duration.

Itinerary editor

- Generate a visual day-by-day itinerary.
- Allow users to reorder days, move activities, add or remove experiences, add free time and transportation, and see each day's cost.
- Show the route on a map and provide usable mobile controls.

Persistence

- Store the trip locally so it survives refreshes.
- Provide a clear reset option without requiring an account.

Deliverables

- Multi-step trip setup
- Destination and interest selection
- Accommodation selection
- Activity selection
- Editable day-by-day itinerary
- Drag-and-drop on suitable devices
- Local persistence
- Trip reset
- Mobile itinerary controls

Dynamic Price Estimator

Objective

Create a transparent estimate that updates immediately as the traveler changes the trip.

Calculation logic

- Consider traveler count, children, duration, accommodation, activities, intercity transportation, private or group tours, and an optional service fee.

Price presentation

- Show accommodation, activities, transportation, service fee, subtotal, total, and per-traveler estimate.
- Support preferred currency and a collapsible mobile cost summary.

Expectation setting

- Clearly state that prices are estimates, availability can affect totals, flights may be excluded, and a travel specialist will confirm the final quotation.

Deliverables

- Documented calculation rules
- Immediate price updates
- Visual cost breakdown
- Price per traveler
- Currency selection
- Mobile cost panel
- Clear estimate disclaimer

Booking Request

Objective

Convert the customized itinerary into a validated travel inquiry rather than a real payment checkout.

Trip review

- Summarize destinations, dates, travelers, accommodation, selected activities, and estimated price.

Traveler details

- Collect full name, email, phone, country, and preferred contact method.

Preferences

- Collect optional dietary, accessibility, room, airport transfer, special occasion, and additional request information.

Confirmation

- Show a booking reference, traveler name, itinerary summary, estimate, expected response time, and next steps.
- Allow the user to print or save the trip summary.

Deliverables

- Multi-step booking form
- Form validation
- Trip review
- Submission success state
- Booking reference
- Confirmation page
- Printable trip summary
- Local or Supabase request storage

PHASE 8

English and Arabic Experience

Objective

Deliver a genuinely bilingual interface, not a partial text translation.

Localization

- Create organized English and Arabic locale files.
- Translate navigation, destination content, forms, validation, dates, prices, confirmation messages, empty states, and errors.

RTL behavior

- Mirror navigation, alignment, directional icons, drawers, breadcrumbs, dialogs, itinerary controls, and relevant map behavior.
- Use suitable Arabic typography and natural Modern Standard Arabic.

Quality review

- Test the entire discovery, planning, pricing, and booking journey independently in both languages.

Deliverables

- Complete English interface
- Complete Arabic interface
- Reliable RTL layout
- Localized dates and currencies
- Mirrored directional behavior
- Arabic typography
- Bilingual end-to-end testing

Animation and Visual Polish

Objective

Turn the functional website into a memorable portfolio presentation through purposeful motion and refined design.

Motion system

- Use subtle hero entrances, image reveals, destination transitions, map selections, filter transitions, trip-builder progress, itinerary movement, price updates, page transitions, and booking confirmation.
- Respect reduced-motion preferences and keep interactions fast on mobile.

Visual refinement

- Improve image treatment, spacing, responsive typography, hover states, focus states, skeletons, empty states, and consistency.
- Do not animate every element. Concentrate on a few signature sequences.

Signature moments

- Polish the homepage hero, interactive map, transition into trip planning, itinerary editor, price estimate, and booking confirmation.

Deliverables

- Refined transitions
- Purposeful interaction motion
- Reduced-motion support
- Optimized imagery
- Consistent spacing and typography
- Polished states
- Final mobile visual review

Testing, Performance, and Portfolio Delivery

Objective

Prepare Wanderlush Egypt for public demonstration and presentation to freelance clients.

Functional testing

- Test discovery, destination selection, activities, itinerary editing, accommodation changes, estimates, and booking submission.
- Verify every visible action, filter, route, form, language switch, and persisted state.
- Remove console errors and warnings.

Responsive testing

- Review small and large phones, tablets, laptops, and widescreen displays.
- Pay special attention to navigation, map, filters, galleries, drag-and-drop, price summary, forms, and Arabic RTL.

Performance and SEO

- Optimize hero media, galleries, lazy loading, fonts, JavaScript, animation performance, and layout stability.
- Add titles, descriptions, social preview image, favicon, semantic headings, helpful URLs, and destination metadata.

Portfolio assets

- Prepare key desktop and mobile screenshots, Arabic views, trip-builder imagery, booking confirmation, live URL, GitHub link, README, case study, and a 60-90 second demonstration video.

Deliverables

- Public production deployment
- Responsive and functional QA
- Optimized assets
- SEO and social metadata
- Portfolio screenshots
- Demonstration video
- Professional README
- Portfolio case study

Scope and Delivery Reference

Recommended Application Routes

Route	Purpose
/	Homepage
/destinations	Destination listing
/destinations/:slug	Destination guide
/experiences	Experience listing
/experiences/:slug	Experience details
/journeys	Curated journeys
/journeys/:slug	Journey details
/trip-builder	Trip configuration and itinerary editor
/trip-summary	Final itinerary and estimate
/booking	Booking request
/booking/confirmation	Booking confirmation
/about	Brand story
/contact	Contact form
/faq	Frequently asked questions
/privacy	Privacy information

Must-Have Features

- Cinematic homepage
- Destination listing and details
- Experience discovery and functional filters
- Interactive Egypt map
- Trip builder and day-by-day itinerary
- Dynamic price estimation
- Multi-step booking request
- Responsive mobile-first experience

- English and Arabic support
- Loading, empty, error, and success states

Strong Enhancements

- Drag-and-drop itinerary
- Shareable trip link
- Printable itinerary
- Favorites
- Recently viewed destinations
- Currency selector
- Route preview map
- Seasonal recommendations
- Polished page transitions

Features to Avoid Initially

- User authentication
- Subscription plans
- Large admin dashboard
- Real online payments
- Live flight or hotel APIs
- Real-time messaging
- Loyalty program
- Complicated backend
- AI chatbot

Scope principle

Each added feature must improve the public demonstration. Do not expand backend complexity at the expense of the cinematic homepage, interactive map, trip builder, mobile quality, or bilingual experience.

Technology and Portfolio Positioning

Recommended Technology

- Next.js or React with Vite
- TypeScript
- Tailwind CSS
- Framer Motion for interface transitions
- GSAP only for one or two cinematic sequences
- Zustand for trip state
- React Hook Form and Zod
- i18next
- dnd-kit
- Mapbox or an interactive SVG map
- Embla Carousel
- Supabase only if booking requests require persistence
- Vercel for deployment

Motion rule

Use Framer Motion for normal interface behavior. Reserve GSAP for a small number of signature storytelling sequences.

Short Portfolio Description

Wanderlush Egypt is an immersive travel discovery and itinerary-building experience that helps visitors explore Egyptian destinations, select curated activities, organize personalized journeys, estimate travel costs, and submit booking requests. The platform combines cinematic storytelling, interactive maps, complex frontend state management, responsive design, and complete English and Arabic support.

Full Portfolio Description

Wanderlush Egypt is a premium travel platform designed to make planning a journey through Egypt more engaging and intuitive. Travelers can explore destinations through an interactive map, discover curated local experiences, build a personalized day-by-day itinerary, and receive a dynamic cost estimate based on their preferences. The experience concludes with a streamlined booking request and printable trip summary. The platform is designed for both English and Arabic users and provides fully responsive LTR and RTL experiences across mobile, tablet, and desktop devices.

Final Acceptance Journey

12. Explore Egypt

13. **Find an inspiring destination**
14. **Add activities**
15. **Build a personalized itinerary**
16. **Understand the estimated price**
17. **Submit a booking request**

Portfolio message

Together, LeadPilot and Wanderlush Egypt show two complementary strengths: dependable business application development and visually exceptional customer-facing experiences.
